

Application Notes

In order to make the amplifier performance properly, please pay attention to the points as follows:

1. In order to prevent AC and electrostatic induction from damaging the module, please make sure every component in the system well-grounded before installing the amplifier.
2. The voltage should be +28V
3. Use anti-static package when stored alone.
4. In order to avoid the surge voltage or current damaging the amplifier. Pls. use stabilized power supply to the amplifier. It will be better if a switch is connected between the output of the power supply and the input of the amplifier.
5. Pls. make sure the input power is lower than +10dBm.
